- ❖ *User preferences and stack protection:* The tools and commands you have at your disposal while you're using a specific stack are determined by both the user level you set on your Preferences card and the stack's user level set in the Protect Stack dialog box. When a stack is set to a different user level than the one set on the Preferences card, HyperCard uses the lower setting (the one closer to Browsing). For information on setting and changing a stack's user level, see "Protecting Your Stack" in Chapter 4. ❖

## Arrow Keys in Text option

When you click any user level button on the Preferences card except Browsing, a checkbox labeled Arrow Keys in Text appears. You turn this option on or off by clicking it.
